

CASE STUDY

Kyn

QR Validation

VALID QR

35,000+

scans processed

zero downtime

Product Designer

Scan the ticket. Validate the event.

Checks venue, date, slot, and ticket before entry.

Built for multi-gate, multi-slot events.

District and BookMyShow already had QR validation live.

Kyn had zero gate-validation tools of its own.

Objectives

01 **Give organizers live visibility at every gate**

02 **Replace vendors, laptops, and Excel sheets**

03 **Handle multi-gate, multi-thousand-attendee scale**

Questions I started with

Why do organizers need this, beyond the scanner?

What happens at ten times the scale?

How do we keep volunteers off shared logins?

What I observed

Organizers ran gates with laptops and Excel

Police kept asking for live entry numbers

Vendors charged per event for validation

One organizer could not staff every gate

CORE PROBLEMS

Gates

No visibility

Police

No live count

Vendors

Recurring cost

Setup

Laptops, Excel

Setup was the sharpest problem. The rest followed from it.

What I worked on

SURFACES

Android

iOS

Mobile Web

Organizer Portal

FOCUS

01

Manage Event hub

02

Context-aware validation

03

Volunteer access

Manage Event hub

One screen instead of five

Booking exports, live attendance, QR validation, volunteers, and analytics, together

Context-aware, not just a scan

Every scan checks location, date, and time slot

A generic “Invalid QR” became a specific reason

Volunteers resolve issues without calling the organizer

One booking, many tickets

A booking can hold several ticket types

A bottom sheet lists type, date, slot, venue

Skipped automatically when only one ticket qualifies

Deliberately minimal

Built for glare, not a demo screenshot

Four to five hour shifts, outdoors, on someone else's battery

Different sounds for pass and fail, camera pauses after a scan

Access, not credentials

Own accounts, Validate QR only

Revocable any time, mid-shift

The current scan finishes before access is cut

Where scope grew mid-build

12:30

By Booking Date

Today - Mon, 27 Jan 2025

Start Date >

End Date >

Date	Bookings	Tickets
25 Sun - Dec, 25	328	999
24 Sat - Dec, 25	328	999
23 Sun - Dec, 25	450	1200
24 Mon - Dec, 25	375	1100
25 Tue - Dec, 25	400	1150
26 Wed - Dec, 25	425	1200
27 Thu - Dec, 25	450	1250
28 Fri - Dec, 25	475	1300

What it led to

Expected chain · step 1 of 5

01

**Fewer vendors,
less Excel**

Manual gate ops replaced by
one screen

Manual gate operations became one screen.

What it led to

Expected chain · step 2 of 5

Multiple volunteers scan at once, at every gate.

What it led to

Expected chain · step 3 of 5

Organizers and officials see the numbers live.

What it led to

Expected chain · step 4 of 5

Listings grew alongside everything else launched that quarter.

What it led to

Expected chain · step 5 of 5

Organizers trust the platform with bigger events.

Learnings

01 **Design for the field, not the demo**

The plainest screen was the right one for a five-hour outdoor shift.

02 **Scope the whole flow before the sprint**

The concert forced a multi-gate rework mid-build. Mapping it earlier would have cost less.

Thank you
