EXPERIENCE

- Kynhood

Product Designer

Jun 2024 – Jun 2026

Chennai

– Took the Events feature from a blank page to a live product across web, mobile, and the operator portal, owning every screen from the first wireframe to what actually shipped. It crossed **Rs. 10 Cr+ GMV** in 14 months.

– Dug into Mixpanel, Clarity, and Google Analytics to find exactly where people were dropping off, then prototyped and tested until retention actually moved: **10% to 31%**, roughly a **3x jump**, with zero paid push behind it.

– Built the design system with full documentation but saw only 10% adoption from engineering. Diagnosed the gap, fused it into a style guide, pushed everything to Storybook and Chromatic for visual regression testing, then published to NPM so developers could pull components directly. Adoption improved significantly after that.

– Used Claude Code, Lovable, and Cursor to build workable prototypes for stakeholders before design and development began. This helped 2 business partners host their events using the apps we built together. Also used design to automate what OPS and Legal used to do by hand.
- Spaarks

UX Design Intern

Feb 2024 – Jun 2024

Remote

– Set up a computational design system from zero: component structure, visual language, style guide, so the team finally had one place to pull from instead of guessing.

– Worked across the full product cycle, PRDs, user research, usability testing, competitor analysis, and made sure what shipped actually solved the problem we set out to solve.
- Cloud Counselage

UX Design Intern

Feb 2022 – Aug 2023

Remote

– Built and led a team over 6 months to ship an MVP that bridged the gap between academics and early careers. Owned design end to end, used HubSpot, Framer, and Wix for low-code clickable prototypes across web and mobile. **1,000+ students** signed up for internships and resources through the platform.

– Hosted design events for students through the portal. Produced 3 SaaS promo videos for marketing using Premiere Pro and After Effects.

SKILLS

- UX and Design

User research, Usability testing, User personas, Journey mapping, Wireframing, High-fidelity UI, Interactive prototyping, Information architecture, Interaction design, Data-driven design, Competitor analysis, SaaS product design
- Design Systems

Component libraries, Token-based design, Style guides, Storybook, Chromatic, NPM publishing, Responsive design, Accessibility (WCAG), Typography, Colour theory, Grid systems
- Design Tools

Figma, Sketch, Adobe XD, FigJam, Illustrator, Photoshop, Canva
- AI and Build

Claude Code, Cursor, Lovable, Bolt, Windsurf, Framer, Wix, HubSpot
- Video and Motion

Premiere Pro, After Effects
- Analytics

Mixpanel, Clarity, Google Analytics
- Interests

MCP-Figma integration, Agentic AI workflows, AI-native product design, Design systems at scale, IoT product UX
- Certifications

UX – Accenture, GUVI, Meta Microsoft – AZ900, PL900

EDUCATION

- B.Tech – Artificial Intelligence and Data Science

Pondicherry University

2020 – 2024

87%

CASE STUDIES

- Kynhood – Design System

Tokens, components, and theming built from first principles. Covers web, mobile, and operator surfaces with full documentation. Published to NPM via Storybook and Chromatic.

View
- Stimuler – UX Enhancement

Ran user research, found where learners lost interest, and redesigned the key flows to hold them.

View
- Recruit CRM – Usability Enhancement

Audited a B2B SaaS recruitment tool, found the usability gaps, redesigned the high-friction areas with better interaction patterns.
